VibroGym – 2015

The original vibration platform that conquered the world .

The VG Retro® is the first successful vibration platform with vertical vibration in the world; over 50% was sold to private individuals. The device was off to a flying start, and it caused a true trend in the world of fitness. To date, not one single vibration machine has proved more powerful or more durable. The VG Retro® offers an overall training, because the vibration trains the entire body rather than individual muscle groups. The new concept of the timeless design is suitable for a wide array of training possibilities. With its compact, space-saving construction, this training device is also highly suitable for small gyms, studios, physical therapy practices and home use.
